DESIGN **CHANGES** EVERYTHING

OFFICE WORKSTATIONS & CHAIRS

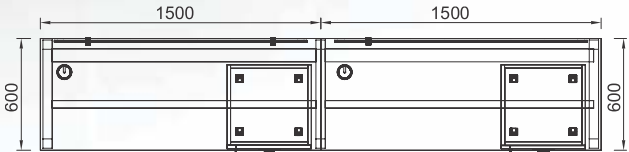

THE BRAND

Ergonomics are more convenient to use. It brings several benefits that every startup would love. The benefits that it brings are both healthy for the mind and body. Ergonomics helps in supporting the posture of the body, because it has the head and back rest that cannot be found from a traditional chair. While sitting, the headrest and the backrest will support the body in order to maintain the posture. What is good with ergonomics is that it can be adjusted depending on the user's comfort.

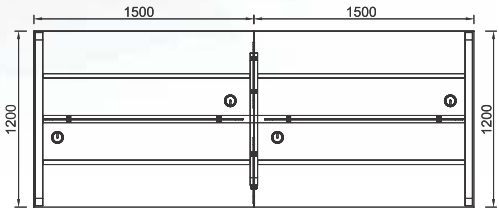

Ergonomics are more comfortable to use. It has adjustable features that will help the body to become comfortable. Sitting down for hours can cause some problems in the body. The most common problems that an individual can experience are neck pains and back pains. The back and neck feel the pain when the chair does not have any back and neck support. However, ergonomics lessen these pains because it has a neck and back rest that supports both parts. This is another reason why ergonomics should be chosen by startups.
